

ScrapeThePantry

Help users find recipes they can make with the ingredients in their fridge.

Benefits:

- Teach people recipes.
- Avoid food waste.
- Good for budgeting.

Scope:

It will provide recipe suggestions to the user.

It will teach the user how to make the suggested recipes.

It will give the option to add more ingredients or stick with what's been given by the user.

It won't make a shopping list for the user.

It won't provide a budgeting plan to the user.

Functional Requirements

Users should have the ability to select and unselect ingredients to make up the recipe.

Users should have the ability to save previous recipes and delete them as desired.

The application must support selecting up to a reasonable maximum threshold of ingredients.

Users will be able to create, edit and delete their own accounts within the app.

Non-Functional Requirements

Pass the accessibility test.

Responsive design.

Performance: Pass Google's lighthouse test.

Load time should be reasonable and quick.
